

# **PHYSIOTHERAPY FOR PATIENTS WITH HEAD AND NECK CANCER**

Aoife Claire McGarvey, BAppSc (Physiotherapy)

A thesis submitted for the degree of PhD (Physiotherapy)

Faculty of Health

University of Newcastle

NSW, Australia

Submitted by 31<sup>st</sup> October, 2014

## Statement of originality

This thesis contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text. I give consent to the final version of my thesis being made available worldwide when deposited in the University's Digital Repository, subject to the provisions of the Copyright Act 1968.

.....

Aoife McGarvey

## Copyright permission

I warrant that I have obtained, where necessary, permission from the copyright owners to use any of my own published work (i.e. journal publications) in which the copyright is held by another party.

## Statement of collaboration

I hereby certify that the work embodied in this thesis has been done in collaboration with other researchers. I have included as part of the thesis a statement clearly outlining the extent of the collaboration, with whom and under what auspices.

For the facial lymphoedema study: Emma Johnson, Speech Pathologist, The Calvary Mater Newcastle Hospital, and Judy Holland, Physiotherapist-in-Charge, The Calvary Mater Newcastle Hospital provided information based on their clinical experience to assist in the development of interview questions.

For the case control and comparative electromyography studies: Clayton Reid, Physiotherapist, The Calvary Mater Newcastle Hospital, and Belinda Allen, The Calvary Mater Newcastle Hospital assisted with data collection. Carole James, PhD, University of Newcastle, provided technical assistance; and Suzanne Snodgrass, PhD, University of Newcastle, provided support with study design.

For the randomised controlled study: Head and Neck Surgeons at the Calvary Mater Newcastle Hospital, Liverpool Hospital and Westmead Hospital, and Luci Dall'Armi, Clinical Nurse Consultant, Liverpool Hospital, assisted with participant recruitment. Narelle Molloy, Physiotherapist, Calvary Mater Newcastle Hospital, Christopher Saliba, Physiotherapist, Liverpool Hospital, Katherine Maka, Physiotherapist, Westmead Hospital, Lilian Wong, Physiotherapist, Westmead Hospital, were the blinded assessors. Matthew Jennings, Physiotherapist, Liverpool Hospital, and Linda Clark, Physiotherapist, Westmead Hospital, were the treating physiotherapists at the Sydney Hospital sites. Dr Patrick McElduff, Statistician, Hunter Medical Research Institute, provided statistical support.

.....

Aoife McGarvey

## Statement of Authorship

I hereby certify that the work embodied in this thesis contains a published paper/scholarly work of which I am joint author. I have included as part of the thesis a written statement, endorsed by my supervisor, attesting to my contribution to the joint publication/scholarly work.

.....

Aoife McGarvey

## Statement of contribution of others

The following thesis is by publication, in accordance with the Rules Governing Research Higher Degrees (Rule 53).

I hereby certify that this thesis is in the form of a series of 6 published papers of which I am a joint author. I have included as part of the thesis a written statement from each co-author, endorsed by Faculty Assistant Dean (Research Training), attesting to my contribution to the joint publications.

## Statements from co-authors

With regards to the publications:

“Lymphoedema following treatment for head and neck cancer: Impact on patients, and beliefs of health professionals”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by constructing interview questions, conduction of interviews, assisting with qualitative data coding and analysis, and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9.14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by constructing interview questions, conduction of interviews, assisting with qualitative data coding and analysis, and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by constructing interview questions, conduction of interviews, assisting with qualitative data coding and analysis, and writing up the discussion and conclusion.

Gary R. Hoffman                      Date 4.9.2014

Faculty Assistant Dean (Research Training)                      Date

“ Physiotherapy for accessory nerve shoulder dysfunction following neck dissection surgery: A literature review”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the literature review, describing the included studies, interpreting results and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9.14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the literature review, describing the included studies, interpreting results and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the literature review, describing the included studies, interpreting results and writing up the discussion and conclusion.

Gary R. Hoffman                      Date 4.9.2014

Faculty Assistant Dean (Research Training)                      Date

“Scapular muscle exercises following neck dissection surgery for head and neck cancer: A comparative electromyographic study”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9.14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Gary R. Hoffman                      Date 4.9.2014

Faculty Assistant Dean (Research Training)                      Date

“ Impact of neck dissection on scapular muscle function: A case-controlled electromyographic study”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9.14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by assisting with study methodology, collection of data, interpreting results and writing up the discussion and conclusion.

Gary R. Hoffman                      Date 4.9.2014

Faculty Assistant Dean (Research Training)                      Date

“ Maximizing shoulder function after accessory nerve injury and neck dissection surgery: A multicentre randomized controlled trial”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by developing the intervention and control protocols, being an intervention group physiotherapist, assisting with selection of outcome measures, interpreting results and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9.14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by developing the intervention and control protocols, being an intervention group physiotherapist, assisting with selection of outcome measures, interpreting results and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by developing the intervention and control protocols, being an intervention group physiotherapist, assisting with selection of outcome measures, interpreting results and writing up the discussion and conclusion.

Gary R. Hoffman                      Date 4.9.2014

Faculty Assistant Dean (Research Training)                      Date

“ Intra-operative monitoring of the spinal accessory nerve: a systematic review”

I, Pauline E. Chiarelli, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the systematic review, describing the included studies, interpreting results and writing up the discussion and conclusion.

Pauline E. Chiarelli                      Date 3.9 14

I, Peter G. Osmotherly, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the systematic review, describing the included studies, interpreting results and writing up the discussion and conclusion.

Peter G. Osmotherly                      Date 4.9.2014

I, Gary R. Hoffman, attest that Research Higher Degree candidate Aoife McGarvey contributed to the listed publication by conducting the systematic review, describing the included studies, interpreting results and writing up the discussion and conclusion.

# Acknowledgements

I would like to acknowledge and thank a number of people who have contributed to this thesis.

Firstly, an enormous thank you to my supervisors: Associate Professor Pauline Chiarelli and Dr Peter Osmotherly. Pauline, your enthusiasm, dedication and sheer determination gave me the confidence to start a thesis. I sincerely thank you for always being available no matter how busy, your wicked sense of humour, and your efficient (and always honest!) feedback. You have been an invaluable support. Peter, I cannot thank you enough for your generosity in sharing your incredible level of professional knowledge and skill. Your ongoing positive encouragement and direction has been my research “backbone”. You have been, and will continue to be, a true mentor.

Secondly, I would like to greatly thank my family and friends. To my Mum, who has always been my personal and academic inspiration. I will forever be indebted to you for the sacrifices that you have made in order for me to pursue education. Your drive and encouragement has fostered my own motivation. Presenting my research in Singapore and Malaysia was unforgettable with you there in the audience. Thank you to my Dad John, sister Cathy, my brother in law Ian, and stepfather John for always seeing the bright side and having faith in my abilities. To all of my friends, especially Sally and BJ, as well as the girls in the RHD research room; thank you for listening, problem solving with me, and being my personal supports. To my partner, Chris, who has been living my PhD with me. You have been an incredible support, and not just in the technical sense! I will always remember your constant reassurance and help in keeping my life balanced while doing my PhD. Your love and commitment along the journey has been extraordinary.

To the Calvary Mater Newcastle Hospital Research Committee, Don and Annette Barker and HMRI, and Hunter New England Health, an enormous thank you in providing financial support to undertake this research.

A sincere thank you to my Physiotherapy Manager, Judy Holland, for supporting and facilitating this research within our department, and to all of my Calvary Mater Newcastle Hospital physiotherapy colleagues, in particular Narelle Molloy and Clayton Reid. The members of the Hunter Head and Neck MDT have assisted immensely, in particular my co-author Associate Professor Gary Hoffman, Dr Chris Wratten and Dr Ben Britton.

I would also like to thank HMRI for the use of their excellent Research Volunteer service and Trish D'Accione, the Co-ordinator for the program, for her outstanding efficiency and help. Thank you to Dr Patrick McElduff, of HMRI, for his statistical advice and support, and to Debbie Booth, University of Newcastle Librarian, and Jane McDonald, for their referencing and formatting assistance.

This research would not have been possible without the participants, who, despite undergoing the trauma of having head and neck cancer and its treatment, were brave and generous enough to take part in the studies and share their experiences. I cannot thank you all enough for what you have provided, to benefit others with head and neck cancer in the future.

## Abstract

The management of head and neck cancer is complex and challenging. Treatment frequently results in physical morbidity, such as shoulder pain and dysfunction, and facial lymphoedema. Neck dissection surgery, involving lymph node removal, is the most common treatment for head and neck cancer. Intra-operatively, the accessory nerve can become injured, even when it remains macroscopically intact, causing reduced trapezius muscle activity and weakness. Shoulder pain and dysfunction ensues, impacting on quality of life and function. Facial lymphoedema can result from the surgical removal of cervical lymph nodes and radiation therapy.

The primary aim of this thesis was to investigate accessory nerve injury related to neck dissection surgery, and the effectiveness of a biomechanically specific physiotherapy intervention compared to a control group. The secondary aim was to explore the effects of facial lymphoedema on patients, and the understanding of and management of the condition by treating health professionals.

The qualitative facial lymphoedema study consisted of interviews of both patients with secondary facial lymphoedema as a result of treatment of head and neck cancer, and treating health professionals. The main effect of the condition experienced by patients concerned appearance and body image. The understanding of interviewed health professionals regarding the condition was found to be similar to the patient experience, however patients experiencing facial lymphoedema were generally not referred to physiotherapy. Treating health professionals need to routinely screen for any potential negative psychological and physical effects of facial lymphoedema, and affected patients referred to physiotherapy if required.

Our literature review found that little evidence exists pertaining to the effectiveness of physiotherapy on accessory nerve shoulder dysfunction after neck dissection surgery exists, with only one previous randomised controlled study published. We then undertook a case control electromyography study, to investigate any scapular muscle activity differences following neck dissection surgery in patients with clinical signs of

accessory nerve injury. The upper trapezius and middle trapezius muscles of patients' operated side were found to have significantly less muscle activity than both a healthy matched control group ( $p < 0.00$ ), and their non-operated side ( $p = 0.001$ ). There was also significantly less electromyographic activity in the upper trapezius of the non-operated side compared with the healthy matched control group ( $p = 0.031$ ). A further comparative electromyography study, investigating scapular muscle activity during specific scapular strengthening exercises, found that overhead strengthening exercises were associated with higher levels of muscle activity. Scapular muscle activity findings from these innovative studies have provided crucial information to maximise the specificity of scapular muscle rehabilitation in this patient population, which then underpinned the development of a specific, graded physiotherapy intervention protocol.

The major study described in this thesis was a blinded, multicentre randomised controlled trial (RCT) to investigate the short and long term effect of progressive scapular strengthening exercises on shoulder pain and dysfunction, compared to usual care in Australia. Per-protocol analysis on 52 participants /53 shoulders demonstrated that the intervention group had statistically significantly higher active shoulder abduction at 3 months compared to the control group ( $+26.6^\circ$ ; 95% confidence interval [CI] 7.28 to 45.95;  $p = 0.007$ ). No significant differences were found between groups for the questionnaires assessing shoulder pain, function and region specific quality of life. At the 6 and 12-month follow-ups, there were no statistical differences between groups. This may reflect either a plateauing of the effect of the intervention in the long term, or the number of participants lost to follow-up. The RCT provided evidence that a progressive scapular strengthening program is more effective than usual care, for patients with accessory nerve injury after neck dissection surgery, that need to rapidly improve their active shoulder abduction.

The second literature review involved the use of, and efficacy for, intra-operative accessory nerve monitoring. It found that there is minimal evidence for its effectiveness in either minimising accessory nerve injury, or as a predictor of shoulder morbidity.

The studies contained in this thesis have provided novel insights which may improve both the multidisciplinary team management, and physiotherapy management, of patients affected with accessory nerve shoulder dysfunction and facial lymphoedema following head and neck cancer treatment. Further studies are required to investigate the effects of physiotherapy intervention in the long-term for accessory nerve shoulder dysfunction, the efficacy of intra-operative accessory nerve monitoring during neck dissection, and management of facial lymphoedema.
