MSc candidate

Professor Manohar Garg

Supervisor

Dr. Katie Wynne

Co-supervisor

Dr. Cintia Dias

Co-supervisor

Thesis submitted to the Faculty of Health and Medicine at the University of Newcastle in fulfilment of the requirement to obtain the degree of Master of Philosophy in Nutritional Biochemistry.

August 2018

Statement of originality

I hereby certify that the work embodied in the thesis is my own work, conducted under normal supervision.

The thesis contains published scholarly work of which I am a co-author. For each such work a written statement, endorsed by the other authors, attesting to my contribution to the joint work has been included.

The thesis contains no material which has been accepted, or is being examined, for the award of any other degree or diploma in any university or other tertiary institution and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text. I give my consent to this copy of my thesis, when deposited in the University Library, being made available for loan and photocopying subject to the provision of the Copyright Act 1968.

Statement of authorship

I hereby certify that this thesis is in the form of a series of published papers of which I am a joint author. I have included as part of my thesis a written statement from each co-author, endorsed by the Faculty Assistant Dean (Research Training), attesting to my contribution to the joint publications.

ACKNOWLEDGEMENTS

It is a great pleasure to acknowledge those people who have assisted me to search, to see and to reach the light at the end of the tunnel. Specifically, I want to thank following people who have assisted me in one way or another along my master's journey over the two years:

I have completed this work with the advice of my supervisors, Professor Manohar Garg, Dr. Katie Wynne and Dr. Cintia Dias, throughout my journey. First, I am indebted to my supervisor Prof. Manohar Garg, whose guidance, feedback and constant availability inspired me to finish the studies. I am thankful to my co-supervisor Dr. Katie Wynne for giving me insightful comments in my academic writing and occasionally challenging me beyond my limits, which I believe strengthened the end product. Katie, you are a remarkable role model that has inspired me with your knowledge. Thank you Dr. Cintia Dias for lending your expertise throughout my Journey.

Cintia, Kylie, Jess, Mel, Alex, Rohith; it was a good journey with fun and laughter (so many funny stories, word etc), coffee and cake. Kylie, I really appreciate your guidance on research methodology for systematic review. Thanks, Sikha for helping me making test biscuits for my trial and friendship that I can cherish my whole life.

My research is supported by a University of Newcastle International Postgraduate Research Scholarship; therefore, I am thankful for the financial support from the University of Newcastle, Australia.

To my husband, Keshav, thank you for understanding and giving me the strength in moments of stress and doubt and for your unconditional love. Keshav, I am forever appreciative of our happy family members for supporting us in many ways at different stages of our journey. Also, thanks to my precious child, PRISHA, for coming into our lives for good reasons.

And finally, I would like to thank all the volunteers who participated in my study and it was truly a pleasure to meet volunteers. I would also like to acknowledge several people who are not mentioned here, but somehow helped in my journey and consequently to my success.

.....we know how to wait.... ..
.....let the stars keep on turning..... ..
.....from little things....big things grow.....

ABBREVIATIONS

CVD	Cardiovascular disease
SFA	Saturated fatty acid
SCFA	Short-chain saturated fatty acid
MCFAS	Medium-chain saturated fatty acid
LCFA	Long-chain saturated fatty acid
apo A-I	Apolipoprotein A-I
TG	Triglyceride
TC	Total cholesterol
LA	Linoleic acid
AA	Arachidonic acid
PUFA	Polyunsaturated fatty acids
n-3PUFA	Omega-3 polyunsaturated fatty acids
n-6PUFA	Omega-6 polyunsaturated fatty acids
sdLDL	Small dense low-density lipoprotein
CLA	Conjugated linoleic acid
EPA	Eicosapentaenoic acid
DPA	Docosapentaenoic acids
DHA	Docosahexaenoic acid
TFA	Trans-fatty acids
NEFA	Non-esterified fatty acids
ACC	Acetyl-CoA carboxylase
FASN	Fatty-acid synthase
CoA	Coenzyme A
VLDL	Very low-density lipoprotein
IDL	Intermediate-density lipoprotein

MUFA	Monounsaturated fatty acids
HMG-CoA	3-hydroxy-3-methyl-glutaryl-CoA
apoC-III	apolipoprotein C-III
apo B	Apolipoprotein B
apo A-IV	apolipoprotein A-IV
apoE	apolipoprotein E
apo B-100	Apolipoprotein B-100
apo B-48	Apolipoprotein B-48
FFA	Free fatty acid
LPL	Lipoprotein lipase
ABCA-1	ATP-binding cassette sub-family A member 1
CETP	Cholesteryl ester transfer protein
LCAT	Lecithin-cholesterol acyltransferase
SR-B1	Scavenger receptor class B type 1
TRL	Triglyceride rich lipoprotein
iAUC	Incremental area under the curve
AUC	Area under the curve
MCT	Medium chain triglyceride
PPARs	Peroxisome proliferator activated receptors
LXR	Liver X receptors
HNF 4	Hepatic nuclear factor 4
SREBPs	Sterol regulatory element binding proteins
HDL	High density lipoprotein
HDL-C	High density lipoprotein cholesterol
HDL-P	High density lipoprotein particles
HDL-TG	High density lipoprotein triglycerides

iAUC	Incremental area under the curve
IDL-C	Intermediary density lipoprotein cholesterol
IDL-TG	Intermediary density lipoprotein triglycerides
LCAT	Lecithin-cholesterol acyltransferase
LDL	Low density lipoprotein
LDL-C	Low density lipoprotein cholesterol
LDL-P	Low density lipoprotein particle
LDLr	Low density lipoprotein receptor
LDL-TG	Low density lipoprotein triglycerides
MUFA	Monounsaturated fatty acids
NEFA	Non-esterified fatty acids
n-6 PUFA	Omega-6 polyunsaturated fatty acids
n-3 PUFA	Omega-3 polyunsaturated fatty acids
PPAR	Peroxisome proliferator-activated receptor
SREBP-1c	Sterol regulatory element-binding protein 1c
TAG	Triacylglycerol
VLDL	Very low-density lipoprotein
VLDL-C	Very low-density lipoprotein cholesterol
VLDL-P	Very low-density lipoprotein particle
VLDL-TG	Very low-density lipoprotein triglycerides
CHD	Coronary heart disease
HDL: LDL-C	HDL-to-LDL cholesterol ratio
LDL: HDL	LDL-to-HDL cholesterol ratio;
Lp(a)	Lipoprotein (a)
mRNA	Messenger RNA
RCT	Reverse cholesterol transport

TC: HDL	Total cholesterol-to-HDL ratio
CB	Coconut biscuit
BB	Butter biscuit
LB	Lard biscuit

SYNOPSIS

Saturated fatty acid (SFA) intake has been linked with increased blood lipid concentrations and increased cardiovascular disease (CVD) risk. Current dietary guidelines consider all SFA as a single group and encourage to reduce saturated fat consumption to 10% of daily energy intake. However, not only the number, position and configuration of double bonds, but also the chain length of SFA have been shown to be a major determinant of their metabolic fate. Short-chain (SCFA, 2-4 carbons long, found in butter and products of fibre and resistant starch fermentation) and medium-chain (MCFAS, 6-12 carbons long, found in coconut and palm kernel oil) are absorbed directly through the villi of the intestinal mucosa and transported to the liver via the portal circulation. In contrast, long-chain (LCSFAS, >12 carbons, found in animal fats and dairy products) follow complex metabolic pathways including chylomicron synthesis in the intestinal villi, secretion into the thoracic lymph, hydrolysis of some triglycerides by lipoprotein lipase into free fatty acids which are transferred to the peripheral tissues (including muscle) followed by chylomicron remnants being taken up into the liver for further metabolism. This, together with the fact that humans spend most of their time in the postprandial state, suggests that saturated fat type may play an important role in overall lipid metabolism and modulation of CVD risk. Therefore, it was hypothesised that consumption of SCFA and MCFAS reduce blood lipid levels compared with LCSFAS.

Our first aim, addressed in chapter 3, was to establish the basis for our hypothesis, conducting systematic review and meta analysis of the literature assessing the differential effects of chain lengths of SFA on blood lipids. The findings from this chapter demonstrate that the consumption of MCFAS enriched diets increased high-density lipoprotein cholesterol (HDL-C) and apolipoprotein A-I (apo A-I) levels compared to LCSFAS diet without any significant effect on triglyceride (TG), low-density lipoprotein cholesterol (LDL-C) and total cholesterol (TC) levels.

In chapter 4, we aimed to determine if SFA of different chain lengths would differentially influence postprandial lipid levels. In a randomised cross-over design, we investigated the effect of a meal (sweet biscuits) rich in either SCFA or MCFAS or LCSFAS on postprandial lipids (TG, TC, LDL-C, and HDL-C). The results presented in this chapter demonstrate that the postprandial triglyceride response following MCFAS

was lower compared to LCSFAS and that predominant fatty acid in the meal is a determinant of the lipemic response.

In conclusion, while this study has highlighted the differential effects of chain lengths of SFA on blood lipids. These results draw attention to the evidence that guidelines on SFA must consider the fatty acid chain length and importantly, the diverse SFA containing foods (processed and unprocessed meats, dairy products, eggs, coconut and palm oils, chocolate) that may possess harmful, neutral or even beneficial effects in relation to cardiovascular health.

THESIS LAYOUT

This thesis by publication is organised in 5 chapters, including one published study in the American Journal of Clinical Nutrition. This thesis contains a general introduction and literature review section (Chapter 1) followed by the methodology undertaken in the conduct of the research (Chapter 2). The introduction, methods, results, discussion of the research conducted for this thesis are then demonstrated as Chapter 3 and Chapter 4. This thesis presents work from a body of research comprised of one systematic review/ meta-analysis and one human research study; (i) differential effects of medium and long-chain saturated fatty acids on blood lipid profile: a systematic review and meta-analysis (Chapter 3) and (ii) medium chain fatty acids lower postprandial lipemia: a randomized, crossover trial (Chapter 4). An overall discussion of the findings from this body of research and its implications are demonstrated in the final chapter of the thesis (Chapter 5).
