

Gene Deletion and Sleep Depletion: Exploring the Relationship between Sleep and Affect in
22q11.2 Deletion Syndrome

Justyn Hyde

BPsych (Hons)

This thesis is submitted in partial fulfilment of the requirements for the degree of Master of Clinical
Psychology.

University of Newcastle

October 2019

Declarations

Statement of Originality

This thesis contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text. I give consent to this copy of my thesis, when deposited in the University Library*, being made available for loan and photocopying subject to the copyright Act 1968.

*Unless an Embargo has been approved for a determined period.

Acknowledgement of Collaboration

I hereby certify that the work embodied in this thesis has been done in collaboration with other researchers. I have included as part of this thesis a statement clearly outlining the extent of collaboration, with whom and under what auspices.

I contributed to the development of the research question, the database search and literature review, the statistical analysis, the interpretation of results and editing of the manuscript. Dr Linda Campbell contributed to all of the aforementioned sections, as well as liaising with other researchers to assist in development of this thesis. Dr Ami Eidels contributed primarily to the statistical analyses and interpretation of results. Prof. Therese van Amelsvoort and Dr Esther van Duin contributed to the data collection and collaboration of data.

Acknowledgements

I would like to firstly thank Dr Linda Campbell for being an excellent supervisor and helping me immensely every step of the way. Without her support this project would not have been able to be completed.

I would also like to think Dr Ami Eidels who selflessly offered his time to assist with statistical support and adding an extra layer of thoughtfulness to the analysis of the data.

I would also like to extend great thanks to Prof. Therese van Amelsvoort, Dr Esther van Duin, Dr Zuzana Kasanova, and Prof. Inez Myin-Germeys without whom the data that this thesis was based upon simply would not have existed.
